${ }^{1}$ Date exclude expenditures of agricultural business and outlays charged to current account. ${ }_{2}$ Anticipated expenditures for the second and third quarters of 1951 were reported by business during May and carly June.

## Scheduled expenditures increasing at slower rate

While capital outlays planned in the third quarter represent a continuation of the upward trend in expenditures which began early in 1950, some slackening in the rate of increase is indicated. The rise anticipated between the second and third quarters is (after seasonal adjustment) only 4 percent as against a rate of increase of about 10 percent between each of the previous five quarters. Capital goods costs, however, have been on a plateau in the past few months so that less of a slackening is implied in the physical volume of additions.
${ }^{3}$ Data include trade, service, communications, construction and finance.
Source: U. S. Department of Commerce, Office of Business Economics, and Securities and Exchange Commission.

On an industry basis, the upward trend in plant and equipment expenditures in the third quarter is confined to manufacturing and the electric and gas utilities, with other major industries expecting to maintain second quarter rates. As can be seen in chart 7 , manufacturing continues to be the main area of expansion, particularly in such industries as primary metals, the metal fabricating group, and paper and pulp. Third quarter programs of manufacturers as a whole, however, also indicate a slowing down in the rate of expansion. Planned capital outlays in the third quarter are 6 percent higher than in the second quarter as against 10 to 20 percent increases in earlier quarters. The electric and gas utilities are the only major group not evidencing a slackening in their rate of growth.

New • Enlarged • Juty 1951 Edition

## National Income

## A Supplement to the Survey of Current Business

## THE ENLARGED NEW EDITION-FIRST SINCE 1947-CONTAINS

- National income and product statistics, 1929-1950
- A review of economic trends in the past two decades
- The basic principles underlying national accounts
- An explanation of methods and sources
- Allowance for inflation: constant vs. current dollars

This 1951 edition, like the original, is not included in the Survey of Current Business subscription, but is sold as a separate publication by the Superintendent of Documents and affiliated sales agencies. A list of Department of Commerce field offices where it may be procured appears on the inside front cover of this magazine.

# National Income and Corporate Profits, First Quarter 1951 

THE national income moved rapidly upward over the past. year, reaching the annual rate of $\$ 269$ billion in the first quarter of 1951. The rise over the initial quarter of 1950 was $\$ 50$ billion, or more than one-fifth.
The advance in income during the past year flowed from an increase in all major shares of income. Expansion in wages and salaries stemmed from increases in employment and wage rates. The sharp upsurge in earnings of farmers and other individual business proprietors reflected the stimulus of expanding demand and higher prices. These same basic influences also accounted for the rapid advance in corporation profits. The movements of the income shares were reviewed in the May issuc excepting the corporate profit component, for which data have only now become available.

## Profit trends

Since early 1950, corporate profits have risen rapidly as all sectors of industry participated in the business upswing. Total book profits before taxes advanced from $\$ 31.9$ billion (annual rates) in the first quarter of last year to $\$ 50.3$ billion in the fourth quarter of 1950. Of the increase, over $\$ 10.3$ billion were carried into the net after taxes, raising the latter to $\$ 27.8$ billion in the fourth quarter. In that quarter dividends moved up to a postwar high as many companies passed on year-end extras. Nevertheless, dividends still represented only two-fifths of earnings after taxes, the remainder being retained by corporations to finance their large capital expenditure programs and for other working capital and reserve purposes.
In the first quarter of this year the rise in corporate profits before taxes slackened--the advance being about 3 percent, on a seasonally adjusted basis, over the fourth quarter rate. As a result of the new provisions of last year's tax bills becoming fully applicable in the first quarter, the tax liability was raised to an over-all rate of about 55 percent of profits before taxes, so that profits after taxes were reduced from $\$ 27.8$ billion in the fourth quarter to about $\$ 23.3$ billion in the first quarter of this year, at seasonally corrected annual rates. Dividend payments in the first quarter dropped below those of the final quarter of 1950, largely because of the unusual volume of year-end special dividends in the former period.
An important factor affecting profit trends in 1950 and carly this year was the rise in prices, since, by usual accounting methods, inventory profits arise whenever prices are advancing. The inventory profits are calculated at over $\$ 8$ billion at annual rates in both the third and fourth quarters of 1950 and were of similar importance in the first quarter of 1951. Thus, in the fourth quarter of 1950, corporate profits on a national income basis-that is, with an adjustment to remove the effects of inventory profits-were $\$ 42$ billion at an annual rate, compared with reported book profits of $\$ 50$ billion.

Many industries showed lower book profits before taxes, unadjusted for seasonal variations, in the first quarter of this year than in the preceding quarter. Among those showing gains in unadjusted earnings before taxes from the final quarter of 1950 were the textiles, lumber, paper, chemicals, and machinery (except electrical) industries. The aircraft industry, notwithstanding a huge and growing backlog of Government business, had lower profits than in the preceding quarter and only moderately higher profits than a year ago. Table 4, (page 26), presents unadjusted quarterly profits by broad industrial groups.

Table 3.-National Income and Product, 1948-1950, Last Twi Quarters 1950 and First Quarter 1951

[^0]
# $M_{\text {onth } h_{y}}$ 

The data here are a continuation of the statistics published in the 1949 Statistical Supplement to the Survey of Currenf Business． That volume（price \＄1．25）contains monthly data for the years 1945 to 1948，and monthly averages for earlier years back to 1935 insofar as avail－ able；it also provides a description of each series and references to sources of monthly figures prior to 1945．Series added or revised since publica－ tion of the 1949 Supplement are indicated by an asterisk $\left({ }^{*}\right)$ and a dagger（ $\dagger$ ），respectively，the accompanying footnote indicating where historical data and a descriptive note may be found．The terms＂unadjusted＂and＂adjusted＂used to designate index numbers and dollar values refer to adjustment of monthly figures for seasonal variation．

Data subsequent to May 1951 for selected series will be found in the Weekly Supplement to the Survey．
