NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in business inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in business inventories; the residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Percent changes from preceding period for selected items in this table are shown in table 8.1

# Summary National Income and Product Series, 1959-94

Tables 1-4 present historical summary series from the national income and product accounts (NIPAs). Tables 1 and 2 cover current- and chained-dollar gross domestic product and its components, table 3 covers

NIPA price indexes, and table 4 covers national income and personal income. These tables reflect the results of the comprehensive NIPA revision that is presented in this issue.
