# National Data 

## A. Selected NIPA Tables

The tables in this section include the most recent estimates of gross domestic product and its components; these estimates were released on August 28, 1997 and include the "preliminary" estimates for the second quarter of 1997.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. In most tables, the annual estimates are also shown. Most of the "annual only" nIpA tables were presented in the August 1997 Survey of Current Business. Tables 8.20-8.26 are presented in the section "Newly Available Tables" elsewhere in this issue. The remaining "annual only" tables-tables 3.15-3.20 and 9.1-9.6-are scheduled to be published in the October Survey.

The selected NIPA tables are available electronically on the day of the gross domestic product (GDP) news release by subscription from stat-usa's Economic Bulletin Board and Internet services; for information, call (202) 482-1986. The tables are also available on printouts or diskettes; for subscription information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, Washington, DC 20230 or call (202) 606-9700.

Note.-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by to0. Because the formula for the chain-type quantity current-dolar value of the corresponding series, divieod indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. indexes uses weights of more than one period, une corresponding chained-doilar estimaies are usualy not aduive. the percent change in real gross domestic product are shown in table 8.2.

| Gross domestic product less motor vehicle output | 6,494.3 | 6,687.1 | 6,597.5 | 6,672.9 | 6,696.8 | 6,781.0 | 6,854.1 | 6,923.0 |

Note.-Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in business inventories is the difference between gross domestic product and the sum of final sales of domesuc product and of change in business inventories; the residual line following sincand of structures.
Percent changes from preceding period for selected items in this table are shown in table 8.1
Table 1.6.-Relation of Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers [Bilions of chained (1992) dollars]

| State and local | 532.2 | 535.2 | 529.6 | 536.3 | 537.0 | 537.9 | 539.9 | 542.1 |
| Residual. | -. 2 | -1.5 |  | -1.3 |  |  | -2.7 | -3.0 |

1. Gross domestic business product equals gross domestic product less gross product of households and institukions and of general govermment. Nonfarm product equals gross domestic business product less gross farm product. 2. Equals compensation of general government employees plus general government consumption of fixed capital as shown in table 3.8 .
NOTE.-Chained (1992) doliar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100 . Because the formula for the chain-type quantity The residual line is the difference between the first line and the sum of the most detailed lines.
