Flow of Funds Accounts
Third Quarter 1979

The tables in this publication present preliminary estimates of third quarter 1979 flows and revisions from the August tables for the first and second quarters of the year. The revisions are based on a variety of more complete information that has become available since August, including in particular the June 30, 1979 Call Report for commercial banks that is a benchmark for bank statements. Figures for 1978 and earlier years are unchanged from the August publication.

Third quarter, 1979. Third quarter estimates that are included in the tables are based on preliminary and incomplete information and are therefore only tentative. At the end of this preface is a list of the principal sources of information that were available in putting together the first quarter on this preliminary basis, and the significance of individual items in the tables should be judged on the basis of the list. The list is summary in form and is by no means a complete statement of sources of data or of derivation methods. Because much of the source information consists of sector balance sheets or statements of activity, the list is organized mainly in terms of sectors. For nonfinancial activity included in the accounts, however, such as sector income and capital outlays, the Commerce Department's income and product accounts are the principal source, and this part of the system is included separately at the beginning of the list.

The items that are shown as available are in general also preliminary in the sense that they are subject to revision once a year on the basis of benchmark data. "Available" for them means that the basic quarterly estimates for them have been completed in a form that will usually stand until the next annual revision. Virtually all quarterly data sources are compiled within five or six months of the end of the quarter, and the distinction between the two columns is not between final and preliminary versions of data but rather between those source estimates that are fully ready when the first quarterly estimate is put together and those that are not yet completed.

Availability. This publication is part of a quarterly series that is usually available at the middle of the second month following the quarter reported and that is distributed to a mailing list. The process of printing and mailing causes delays of up to two weeks or more from the time the estimates are completed, and to facilitate earlier access in the meantime copies of the computer printouts are distributed to Federal Reserve Bank information offices for use by the public.

The current quarterly tables are an extension of a body of data that includes all years from 1946 on an annual basis and quarterly periods from 1952 in both net flows and asset and liability positions. In annual form the data have been published in Flow of Funds Accounts, 1946-75 (December 1976) in both flows and levels. Later asset and liability positions were published in August 1979 Flow of Funds Accounts, Assets and Liabilities Outstanding, 1968-78. A new publication is planned for late this year that will give all tables on a statistically consistent annual basis for all years. Quarterly data will be available soon in computer data tape form for the complete set of data or in specific printings of selected tables.

Requests and inquiries about the data, historical tabulations and computer tapes of the data should be addressed to:

MONEY STOCK RELATIONSHIP

PART LINE

- I 1 Line 1 of page 15.
- 2 Daily averages in this table are increments in month averages from last month of preceding quarter to last month of this quarter.
- 3 Line 1 - 2.
- 4 Lines 5 + 6 + 7.
- 5 See Part II, line 5.
- 6 Part II, line 6 + Part III, line 4.
- 7 Part II, line 7 + Part III, line 5. "Seasonal" here means dollar excess of seasonally adjusted flow over unadjusted flow.
- II 1 Lines 14 + 18 + 19 of page 15 at quarterly rates.
- 5 Differences between money-stock concept of demand deposits derived from last preceding all-bank total (either last Wednesday of quarter of Call Report) and figure for that one day, e.g., March 29, 1972, derived from data going into daily-average statistics. Quarterly increments in this difference.
- 6 Difference between figure derived from daily-average data and average for last month of quarter. Quarterly increments in this difference.
- 7 Lines 8 + 9 + 10 - 11.
- 8 Difference in adjustment method: seasonal in daily-average series (month average) adjusted as flows less seasonal in published daily-average series.
- 9 Seasonal in F/F demand deposit (based on net change from last day of one quarter to last day of next) less seasonal in daily-average adjusted as flows.
- 10 Adjustment to seasonal needed as part of the balancing of all seasonally adjusted sources and uses of funds in the flow-of-funds matrix.
- III 4 No statistical difference between the two series. In unadjusted data, only difference is between one-day figure for end-of-quarter and three-week average.
- 5-9 Correspond to lines 7 through 11 to Part II.
