## Flow of Funds Summary Statistics

### First Quarter 2006

---

Debt of the domestic nonfinancial sectors rose at a seasonally adjusted annual rate of 11 percent in the first quarter of 2006, faster than the previous quarter's pace of 9-1/2 percent. The first-quarter acceleration in domestic nonfinancial debt was primarily accounted for by increased borrowing by businesses and the federal government.

Household debt expanded at an annual rate of 11-1/2 percent in the first quarter of 2006, a bit faster than in the previous quarter. Consumer credit posted a small increase in the first quarter following a slight contraction toward the end of 2005, while home mortgage debt grew at about the same rapid pace as in the previous quarter. In the first quarter, nonfinancial business debt rose at a 10-1/2 percent pace, about 2 percentage points faster than in the fourth quarter of 2005. The increase in business debt last quarter reflected strength across almost all of the major components of borrowing.

State and local government debt rose at an annual rate just under 6 percent in the first quarter, after having expanded at a pace of 8-1/2 percent in the previous quarter. The first-quarter deceleration of state and local government debt reflected slower net issuance for new capital projects and for advance refundings. In the first quarter of 2006, federal government debt expanded at a seasonally adjusted annual rate of almost 13 percent, noticeably faster than in the previous quarter but somewhat slower than the pace registered in the first quarter of 2005.

At the end of the first quarter of 2006, the level of domestic nonfinancial debt outstanding was \$27.1 trillion. Household debt amounted to \$11.8 trillion, and nonfinancial business debt was \$8.6 trillion. Combined, state and local governments and the federal government had outstanding debt of \$6.7 trillion.

## Flow of Funds Accounts, First Quarter 2006

---

This publication presents the flow of funds accounts for 2006:Q1.

**Data revisions and other changes.** The statistics in the attached tables reflect the use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods.

1. Data for investment and depreciation flows for all sectors, and capital stocks for the household, nonfarm nonfinancial corporate, and nonfarm noncorporate business sectors have been revised from 1947 through 1986. The revised data reflect new annual estimates of fixed assets from the Bureau of Economic Analysis of the Department of Commerce, which completed the release of the conversion of fixed assets from an SIC basis to a NAICS basis.

2. Assets of the nonfarm nonfinancial corporate business sector (tables F.102 and L.102) were revised from 2004:Q1 onward to reflect advance data from the Internal Revenue Service (IRS) *Statistics of Income* (SOI) for 2004.

3. Assets of the private pension fund sector (tables F.118, F.118.b, F.118.c and L.118, L.118.b, L.118.c) were revised from 1995:Q1 to 2005:Q4 to reflect new estimation methods and new data from the Department of Labor's Form 5500 for plan year 2001.

**Explanatory notes for tables D.1, D.2, and D.3.** Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, agency- and GSE-backed mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in

flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those in table D.1.

**Relation of Flows to Outstandings.** Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time specifically, outstanding in the flow of funds accounts are related to the flows in the following way:

Outstanding<sub>t</sub> = Outstanding<sub>t-1</sub> + Flow<sub>t</sub> + Discontinuity<sub>t</sub>  
where "t" is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated as:

Percentage change<sub>t</sub> = (Flow<sub>t</sub> / Outstanding<sub>t-1</sub>) \* 100

**Preliminary Estimates.** Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter's data were compiled is provided in a table following this introduction. The distinction between "available" data and "missing" data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

**Margins of Uncertainty.** Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of “discrepancies” for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

**Availability of Data.** Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication — the Z.1 release — is available from the Board's Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

<http://www.federalreserve.gov/releases/Z1>

The Internet site also provides quarterly data beginning in 1952, organized in compressed files that correspond to the tables published in this release. There are files for quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, and debt (tables D.1, D.2, and D.3).

A *Guide to the Flow of Funds Accounts* is available. The 1,200-page *Guide*, published in two volumes in January 2000, explains in detail how the U.S. financial accounts are prepared and the principles underlying the accounts. The *Guide* can be purchased for \$20.00 from the Board's Publications Services. Publications Services accepts orders accompanied by checks as well as credit card orders.

The Internet site for this release at the location shown above contains a link to an order form for the *Guide* that can be mailed or faxed to Publications Services. In addition, the Internet site includes a link to the *Guide's* descriptions of the tables in the flow of funds accounts.

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 32). The matrix shows a discrepancy in column 17 for monetary gold and SDRs (line 4) because by international accounting convention, such instruments are financial assets without corresponding liabilities.
