## Release Highlights Second Quarter 2017

Topic	Description
National income and product accounts annual revision	The statistics in this publication reflect annual revisions to the national income and product accounts (NIPAs) from 2014:Q1 forward released by the Bureau of Economic Analysis (BEA) of the Department of Commerce on July 28, 2017, and subsequent information for 2017:Q2 released on August 30, 2017. The August 2017 issue of the Survey of Current Business provides details on the major features of this annual revision.
Fixed assets annual benchmark	Data for investment and depreciation flows and capital stocks for all sectors have been revised beginning in 2014 to reflect updated annual estimates of fixed assets from the BEA.
Seasonal adjustment	Seasonal factors for quarterly flows have been recalculated for the period 2007:Q1 forward. The seasonal factors are generated using the X-12-ARIMA seasonal adjustment program from the U.S. Census Bureau.
Private pension fund benchmark	Assets of the private pension fund sector (tables F.118, F.118.b, F.118.c, L.118, L.118.b, and L.118.c) have been revised beginning in 2015:Q1 to reflect new data from the U.S. Internal Revenue Service/Department of Labor/Pension Benefit Guaranty Corporation Form 5500 filed for plan year 2015.
Private pension funds' holdings of debt securities reported at market value	Beginning in 2006:Q1, debt securities held by the private pension fund sector (tables F.118, F.118.b, F.118.c, L.118, L.118.b, and L.118.c) are reported at market value, consistent with the international standards described in the System of National Accounts (SNA2008).
National Railroad Retirement Investment Trust's holdings of debt securities reported at market value and new estimation method	Debt securities held by the National Railroad Retirement Investment Trust (NRRIT), a small component of the federal government employee retirement funds: defined benefit plans sector (tables F.119.b and L.119.b), are now reported at market value beginning in 2002:Q3. Additional revisions to series derived from NRRIT data sources reflect an improved estimation method based on annual financial statements.
Federal government employee retirement funds: defined contribution plans' holdings of debt securities reported at market value	Debt securities held in the Federal Employees Retirement System (FERS) Thrift Savings Plan (TSP) F fund, part of the federal government employee retirement funds: defined contribution plans sector (table F.119.c and L.119.c), are now reported at market value beginning in 1988:Q1. The valuation of debt securities held in the TSP G fund is unchanged because they are nonmarketable.
State and local government employee retirement funds: defined benefit plans' holdings of debt securities reported at market value and new estimation method	Debt securities held in the state and local government employee retirement funds: defined benefit plans sector (tables F.120.b and L.120.b) are now reported at market value. Also, a new method based on fund-level individual-unit file data from the Census Annual Survey of Public Pensions is now used to estimate checkable deposits, time and savings deposits, agency and GSE-backed securities, and domestic corporate bonds. Revisions begin in 2002:Q2.

Topic	Description
Finance company benchmark	The finance company sector (tables F.128 and L.128) has been revised from 2015:Q4 forward to incorporate the Federal Reserve 2015 Census of Finance Companies (CFC) and Survey of Finance Companies (SFC). The CFC and SFC are conducted every five years.
Rest of the world sector revision	Revisions to the rest of the world sector (tables F.133 and L.133) reflect revised estimates of the U.S. international transactions accounts (ITAs) and the U.S. international investment position (IIP) accounts released by BEA for 1999:Q1 forward. BEA's changes are detailed in the July 2017 Survey of Current Business.

# Explanatory Notes

## Financial Accounts of the United States

The Statistical Release Z.1, “Financial Accounts of the United States,” is organized into the following sections:

- Matrices summarizing flows and levels across sectors, tables on debt growth, net national wealth, gross domestic product (GDP), national income, saving, and so on
- Flows of financial assets and liabilities, by sector and by financial instrument
- Levels of financial assets and liabilities, by sector and by financial instrument
- Balance sheets, including nonfinancial assets, and changes in net worth for households and nonprofit organizations, nonfinancial corporate businesses, and nonfinancial noncorporate businesses
- Supplementary tables providing equity detail of the household and nonprofit organization sector and data on nonprofit organizations
- Integrated Macroeconomic Accounts

The Integrated Macroeconomic Accounts (IMA) relate production, income, saving, and capital formation from the national income and product accounts (NIPA) to changes in net worth from the “Financial Accounts” on a sector-by-sector basis. The IMA are published jointly by the Federal Reserve Board and the Bureau of Economic Analysis and are based on international guidelines and terminology as defined in the System of National Accounts (SNA2008).

Federal Reserve Board staff have taken many steps over the past several years to conform the “Financial Accounts” with the SNA guidelines. Nonetheless, a few important differences remain. In particular, in the “Financial Accounts”:

- The purchase of consumer durables is treated as investment rather than as consumption.
- Nonfinancial noncorporate businesses (which are often small businesses) are shown in a separate sector rather than being included in the household sector.
- Some debt securities are still recorded at book value.

## Concepts of Level and Flow in the SNA and the Financial Accounts

The level of an asset or liability (also referred to as the stock or outstanding) measures the value of the asset or

liability in existence at a point in time. In the “Financial Accounts,” the levels are reported as of the end of each calendar quarter. In the SNA2008, the change in the level from one period to the next is called the “economic flow,” and can be decomposed into three broad elements: *transactions*, which measure the exchange of assets; *revaluations*, which measure changes in the price of untraded assets; and *other changes in volume*, which measure discontinuities or breaks in time series due to disaster losses or a change in source data or definition.

In the “Financial Accounts,” “flows” refer to the exchange of assets, corresponding to the SNA definition of transactions, that is, “flow tables” in the “Financial Accounts” are equivalent to “transaction tables” in the SNA terminology. In practice, other volume changes are relatively rare, and revaluations occur mainly for series carried at market value (such as corporate equities, real estate, and some debt securities), so for many series the change in the level is equal to the flow.

## Growth Rates

Growth rates calculated from levels will include revaluations and other changes in volume. To isolate the effect of transactions on the growth of a given asset or liability, users should calculate the ratio of the flow in a given period to the level in the preceding period.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Growth rates calculated from changes in unadjusted levels may differ from those in table D.1.

## Seasonal Adjustment

Seasonal factors are recalculated and updated every year, and these revised factors are first published in the September release of second-quarter data. All series that exhibit significant seasonal patterns are adjusted. The seasonal factors are generated using the X-12-ARIMA seasonal adjustment program from the U.S. Census Bureau, estimated using the most recent 10 years of flow data. Because the effects of the recent financial crisis resulted in large outliers in some series that would have distorted the estimated seasonal factors, seasonal factors for some series were extrapolated using pre-crisis data. Seasonally adjusted levels shown in table D.3 are derived by carrying forward year-end levels by seasonally adjusted flows.

## Data Revisions

Data shown for the most recent quarters are based on preliminary and potentially incomplete information. A summary list of the most recent data available for each sector is provided in a table following these notes. Nonetheless, when source data are revised or estimation methods are improved, all data are subject to revision. There is no specific revision schedule; rather, data are revised on an ongoing basis. In each release of the “Financial Accounts,” major revisions are highlighted at the beginning of the publication.

## Discrepancies

The data in the “Financial Accounts” come from a large variety of sources and are subject to limitations and uncertainty due to measurement errors, missing information, and incompatibilities among data sources. The size of this uncertainty cannot be quantified, but its existence is acknowledged by the inclusion of “statistical discrepancies” for various sectors and financial instruments.

The discrepancy for a given sector is defined as the difference between the aggregate value of the sector’s sources of funds and the value of its uses of funds. For a financial instrument category, the discrepancy is defined as the difference between the measurement of funds raised through the financial instrument and funds disbursed through that instrument. The relative size of the statistical discrepancy is one indication of the quality of the underlying source data. Note that differences in seasonal adjustment procedures sometimes result in quarterly discrepancies that partially or completely offset each other in the annual data.

## Financial Accounts Guide

Substantially more detail on the construction of the “Financial Accounts” is available in the *Financial Accounts Guide*, which provides interactive, online documentation for each data series. The tools and descriptions in the guide are designed to help users understand the structure and content of the “Financial Accounts.” The guide allows users to search for series, browse tables of data, and identify links among series within these accounts. It also provides descriptions of each of the published tables and information on the source data underlying each series. Data on some of our data submissions to international organizations are also available on the guide page. There is also a link to the Enhanced Financial Accounts, a new initiative that includes data that is not part of the core “Financial Accounts”.

The guide is not part of the quarterly release, but it is continually updated and kept consistent with the most recently published data. The guide and the data from the “Financial Accounts” are available free of charge online:

[www.federalreserve.gov/apps/fof](http://www.federalreserve.gov/apps/fof)

Each input and calculated series in the Z.1 is identified according to a unique string of patterned numbers and letters. The series structure page of the guide provides a breakdown of what the letters and numbers represent in the series mnemonics. The relationships between different components of a series (for example, levels, seasonally adjusted annual rate flows, unadjusted flows, revaluations, other changes in volume, seasonal factors, and so on) are also described on the series structure page.

## Production Schedule

The “Financial Accounts” are published online and in print four times per year, about 10 weeks following the end of each calendar quarter. The publication with series mnemonics and the guide are available online:

[www.federalreserve.gov/releases/Z1](http://www.federalreserve.gov/releases/Z1)

This website also provides CSV files of quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, debt (tables D.1, D.2, and D.3), supplementary tables, and the IMA.

In addition, the data are available as customizable datasets through the Federal Reserve Board’s Data Download Program at:

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 24) and equity in noncorporate business (line 30). The matrix shows a discrepancy in column 17 for monetary gold (line 4) because by international accounting convention, monetary gold is a financial asset without a corresponding liability.

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 24) and equity in noncorporate business (line 30). The matrix shows a discrepancy in column 17 for monetary gold (line 4) because by international accounting convention, monetary gold is a financial asset without a corresponding liability.

(1) U.S. net wealth measures the value of tangible assets controlled by the household and nonprofit organizations, noncorporate business, and government sectors of the U.S. economy and the market value of domestic nonfinancial and financial corporations, net of U.S. financial obligations to the rest of the world (sum of lines 2+7+12+13+16+20+24).

(2) Assumed to be equal to proprietors' equity in noncorporate brokers and dealers.

(3) This measure does not equal the net worth of the nonfinancial corporate business and financial business sectors reported in the Integrated Macroeconomic Accounts (tables S.2.a and S.2.q) because of differences in the valuation of assets.

(4) Excludes land and nonproduced nonfinancial assets.

(5) Household net worth is calculated as the difference between total assets and liabilities of the household and nonprofit organizations sector. See table B.101.

(1) Sum of lines 25 and 28 less line 31 plus line 34.

(2) Interbank transactions between U.S. banks should net to zero and thus are not shown in lines 1 through 12 above. However, the unallocated amount (line 44), which is due to inconsistencies in source data, appears on line 13 as the discrepancy between liabilities and assets.

(3) Sum of lines 40, 41, 42, and 44.

(1) Consists of rental income of tenant-occupied housing and proprietors' income. Quasi-corporations are unincorporated enterprises that function as if they were corporations; they primarily cover their operating costs through sales, and they keep a complete set of financial records.

(2) Government-sponsored enterprises (GSEs) consist of Federal Home Loan Banks, Fannie Mae, Freddie Mac, Federal Agricultural Mortgage Corporation, Farm Credit System, the Financing Corporation, and the Resolution Funding Corporation, and they included the Student Loan Marketing Association until it was fully privatized in the fourth quarter of 2004.

(3) The statistical discrepancy is the difference between net lending or net borrowing derived in the capital account and the same concept derived in the financial account. The discrepancy reflects differences in source data, timing of recorded flows, and other statistical differences between the capital and financial accounts.

(4) Excludes land.
