

FEDERAL RESERVE statistical release

Z.7 (788)

For immediate release
January 5, 1996

FLOW OF FUNDS SUMMARY STATISTICS

Growth of domestic nonfinancial debt slowed to a seasonally adjusted annual rate of 3-3/4 percent in the third quarter of 1995, from an average pace of 6-1/2 percent in the first half of the year. Federal debt registered only a small 1-3/4 percent rate of advance. Within the nonfederal sectors, business debt growth slowed in the third quarter to a 4-1/2 percent rate from an almost 8 percent pace in the first half of the year. Net bond issuance remained strong, but businesses reduced their borrowing from banks and the commercial paper market. State and local government debt contracted sharply in the third quarter, as retirements of previously refunded debt continued to outstrip new issuance. Meanwhile, household debt increased at an 8 percent rate, about unchanged from earlier in the year, owing to sizable increases in both consumer credit and home mortgage debt.

This release incorporates benchmark and seasonal adjustment revisions to the flow of funds accounts. Data revisions cover both flows and outstandings. Most revisions are for the period since 1975, and seasonal factors for quarterly financial flows have been updated for the period 1985:Q1 forward. The tables that follow show financial flows and outstandings for credit market debt and a selected number of sectors. The tables do not include the integration of financial flows with nonfinancial economic activity typically published, owing to the delayed release of revised figures for the national income and product accounts (NIPA) from the Department of Commerce. The complete set of flow of funds tables (the Z.1 release) and the flow of funds diskettes will be published after the NIPA information becomes available.

A. Growth of Domestic Nonfinancial Debt¹
(Percentage changes; quarterly data are seasonally adjusted annual rates)

		Nonfederal			State & local govt.
	Total	U.S. govt.	Total	Households	Business
1989	7.6	7.0	7.8	8.8	7.5
1990	6.6	11.0	5.3	7.9	3.1

Q2	6.6	10.7	11.2	7.7
Q3	3.8	25.2	10.3	5.7

1. Holdings of deposits and credit market claims by households, nonfinancial business, and state and local governments.

Explanatory Notes

Domestic debt includes credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, federally related mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans, as shown in table L.2; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in the summaries above are calculated by dividing seasonally adjusted flows from table F.2 by seasonally adjusted levels at the end of the previous period. Seasonally adjusted quarterly levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels printed in table L.2 can differ from those shown above.

Subscriptions to this summary release may be obtained through **Publications Services, Stop 127, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, (202) 452-3244**. This release is also available on the **Economic Bulletin Board** of the Department of Commerce. A **Guide to the Flow of Funds Accounts** is available from Publication Services for \$8.50. The **Guide** explains the principles underlying the accounts and describes how they are constructed.

Benchmark Revision of the Flow of Funds Accounts

Data in the flow of funds accounts have been revised to reflect new or more complete sources and improved estimation methods; there have been few changes to the structure of the accounts. Highlights of the flow of funds revisions reflected in the following tables include:

- Assets and liabilities of nonfinancial corporate firms (tables F.104 and L.104) were matched to figures published in the Internal Revenue Service's *Statistics of Income* (SOI) for 1975-1992, raising the levels outstanding and altering the composition. The pattern of quarterly flows continues to be derived from the Census Bureau's *Quarterly Financial Report for Manufacturing, Mining, and Trade Corporations*. Overall, the changes to the business sector should allow for more accurate analysis of balance sheet positions.

- The market value of equity outstanding of nonfinancial corporations (table L.104, line 41) has been revised. For the period 1988 forward, the value is substantially lower than previously estimated. This change resulted from a revision to the market value of equity issued by financial corporations (based on more detailed source data) and did not affect the market value of total corporate equity outstanding.
- The financial data for unincorporated firms (tables F.103 and L.103) have been revamped to align them more closely to SOI benchmarks and to compositional details evident in the *1989 National Survey of Small Business Finance*. The overall level of financial assets was raised for the period 1986 forward and the composition of both assets and liabilities was altered.
- For the rest of the world sector (tables F.109 and L.109), the revisions reflect primarily changes in data from the Commerce Department's balance of payments accounts for the period from 1982 forward.
- Financial flows and asset levels for private pension funds (tables F.123 and L.123) were more closely aligned to aggregates derived from data contained in annual reports (form 5500) filed with the Internal Revenue Service and the Department of Labor. Moreover, new source data have been used to estimate quarterly flows. Most changes cover the period from 1986 forward. Reported asset totals are lower than previously published, and quarterly flows into private pension funds exhibit less volatility.
- The method for computing financial flows for state and local government employee retirement funds from 1981 forward (tables F.124 and L.124) was changed. The new method is based on data for net contributions to the plans—that is, contributions and income received less benefits paid and expenses. Estimates of the level of total assets in state and local government employee retirement funds were not affected.
- The value of long-term municipal securities outstanding (table L.2, line 6) has been increased from 1978 forward to account for additional holdings in the household sector and the nonfinancial corporate sector. The larger amount in the household sector reflects new estimates of holdings of investment management accounts and unit investment trusts. Individual holdings continue to be aligned with data from the Federal Reserve Board's *Survey of Consumer Finances*.

(1) U.S. net sales, sign reversed.

(2) Through 1992:Q4, corporate bonds include net issues by Netherlands Antillean financial subsidiaries, and U.S. direct investment abroad excludes net inflows from those bond issues.

(3) Direct investment is valued on a current-cost basis. Excludes capital gains/losses. Components of direct investment--equity, reinvested earnings, and intercompany accounts--are not available before 1982.

(4) Includes American Depository Receipts (ADRs).

(1) U.S. net sales, sign reversed.

(2) Through 1992:Q4, corporate bonds include net issues by Netherlands Antillean financial subsidiaries, and U.S. direct investment abroad excludes net inflows from those bond issues.

(3) Direct investment is valued on a current-cost basis. Excludes capital gains/losses. Components of direct investment--equity, reinvested earnings, and intercompany accounts--are not available before 1982.

(4) Includes American Depository Receipts (ADRs).
